

## **PROJECT PROBLEM STATEMENT**

1. We are trying to solve the problem of a restaurant owner. who is going bankrupt as his restaurant as his business has been affected due to Covid- 19, he is not having a lot of customers after opening up post pandemic and We are trying to improve the overall reach for the restaurant through a Web-based platform.
2. Our assumption to the problem is that social distancing restriction has been lifted but people are not coming in as expected to dine in at the restaurant as the restaurant is not that famous.
3. We are trying to design a web-based solution that facilitates multiple features like Vlogging, Cooking videos, Hiring process etc., the reach for the restaurant will increase thereby resulting in more customers. By addressing these aspects his problems will be resolved.
